

- Group number: Group 3
- Group Members: Lawrence Meng, Preston O'Connor, Nathan Wolf, Steven Zhang
  - Manager: Aditi
- Working on Project: Minutematch
- External modules/frameworks: (not set in stone)
  - Frontend (React)
    - React Router
    - CSS
    - Axios/Fetch API
  - Backend (Node.js + Express)
    - express-validator
    - dotenv
    - node-cache/Redis
    - Express
  - Database (PostgreSQL)
    - pg (node-postgres)
    - SQL
- Distribution of work:
  - Every week, we meet once outside of class time to talk about our overall progress.
    - Discuss what we have accomplished, what we are working on, and any other related progress
    - Use this as a window to discuss bugs or implementation issues we have been experiencing
    - Group messaging will be used for any short-term errors or questions on the model or inputs to refine the model.
      - Aditi is familiar with the tech stack so questions related to eros in this realm will also be useful to ask her
  - Probably not going to give defined roles to people, i.e., Steven isn't assigned *all* the frontend tasks, Preston isn't assigned *all* the database things. Instead, it will likely be a 'identify some problem', send it in the team iMessage chat/Slack channel, and someone will claim it to work on it.
    - Following a sprint setup of outlining tasks and showing the progress we made, and any issues with it
  - Everyone should be doing about an equivalent amount of work
    - If someone has a heavy workload one week with other classes, someone else will do more. Then the first person will do more some other week.
